IOSCO Basis	Principle 15 — Complaints Procedures
Effective	March 2026
Document Status	Active

This document sets out CCIR's procedure for receiving, investigating, and resolving complaints relating to index determinations, methodology application, data source eligibility, and governance conduct. It is published in satisfaction of IOSCO Principle 15 (Complaints Procedures) and forms part of CCIR's governance framework alongside the Governance and IOSCO Alignment Statement and the Benchmark Change Management and Versioning Policy.

A complaint is any written expression of dissatisfaction with a published index value, a methodology application decision, or CCIR's conduct as benchmark administrator. Complaints are distinct from methodology change requests, which are addressed through the change management process. CCIR treats all complaints seriously and commits to respond to every complaint within the timelines set out below.

1. How to Submit a Complaint

Complaints must be submitted in writing to:

research@ccir.io

Subject line: COMPLAINT — [brief description]

A complaint submission should include:

- The name and contact details of the complainant (anonymous complaints are accepted but limit CCIR's ability to seek clarification and provide a written determination)
- The specific index value, determination date, or conduct that is the subject of the complaint
- The basis for the complaint — why the complainant believes the determination or conduct is inconsistent with the published methodology or governance framework
- Any supporting data or documentation the complainant wishes CCIR to consider

Complaints may be submitted by any party, including counterparties to credit agreements citing CRI rates, lenders, borrowers, rating agency staff, structured finance counsel, data providers, and members of the public.

2. Scope of Complaints

The following categories of complaint are within scope of this procedure:

Category	Examples
Index determination	Published index value appears inconsistent with observed market prices; computation appears to deviate from published methodology; confidence flag appears incorrectly assigned.

Data source eligibility	A specific source or listing appears to have been incorrectly included or excluded from the Silver-eligible pool; machine_id deduplication appears to have malfunctioned.
Methodology application	A published filter or threshold appears to have been applied incorrectly; a source appears to have contributed observations inconsistent with its documented eligibility criteria.
Governance conduct	Concerns about CCIR's structural independence; potential undisclosed conflicts of interest; failure to follow change management or notification procedures.
Methodology design	Requests for methodology changes or new index series. Note: methodology design requests are not complaints and do not follow this procedure — they are addressed through the change management process. However, a request that also alleges a current methodology deficiency will be treated as a complaint to the extent of the alleged deficiency.

Complaints that fall outside this scope — for example, commercial disputes between market participants that do not involve CCIR's benchmark determinations — will be acknowledged but are not subject to the investigation and determination process below.

3. Complaints Process

The table below summarizes the standard complaints process from receipt to resolution.

Step	Timing	Action
1 — Receipt	Day 0	Complaint received at research@ccir.io. Logged to internal complaints register with date, complainant identity (if provided), and subject matter.
2 — Acknowledgment	Within 2 business days	CCIR sends written acknowledgment confirming receipt, assigned reference number, and expected determination timeline.
3 — Review	Within 10 business days of receipt	CCIR reviews the complaint against the published methodology, pipeline records, and governance framework. Additional information may be requested from the complainant, which extends the timeline by the number of days taken to respond.
4 — Determination	Within 10 business days of receipt (or extended timeline)	Written determination issued to the complainant stating: (a) whether the complaint is upheld, partially upheld, or not upheld; (b) the reasons for the determination; and (c) any corrective action taken or planned.
5 — Escalation	Upon Oversight Board formation (Q1 2027)	Complainants dissatisfied with the determination may request escalation to the Oversight Board within 10 business days of receiving the determination. The Board's decision on escalated complaints is final.
6 — Register Update	Upon determination	Complaints register updated with determination outcome and any corrective actions. Aggregate complaint statistics published annually in the CCIR governance review.

3.1 Timeline Extensions

Where a complaint requires review of extended pipeline records or external data verification, CCIR may extend the determination timeline by up to 10 additional business days. The complainant will be notified of any extension within the original 10-business-day period, with an explanation of the reason for the extension and the revised expected determination date.

3.2 Interim Disclosure

Where a complaint raises a question about whether a published index value may be materially incorrect, CCIR will publish a notice on ccir.io within 2 business days of determining that a material question exists. The notice will identify the affected index and date range and state that a review is in progress. CCIR will not suspend publication of subsequent index values pending complaint resolution unless the complaint reveals a pipeline failure that makes ongoing publication unreliable.

3.3 Corrective Action

If a complaint is upheld and CCIR determines that a published index value was computed incorrectly due to a pipeline error or methodology misapplication, CCIR will publish a correction notice and, where technically feasible, a corrected value alongside the original published value. Corrected values are not restated in place of original values — they are published as amendments with clear disclosure of the nature and magnitude of the correction.

Corrections do not require a methodology version bump unless the complaint reveals that the pipeline was systematically applying an eligibility filter differently from the published methodology, in which case the correction constitutes a patch change under the Change Management Policy.

4. Confidentiality

CCIR treats the identity of complainants as confidential unless the complainant consents to disclosure or disclosure is required by law. Complaint determinations may be summarized in aggregate in CCIR's annual governance review without identifying individual complainants.

CCIR will not use information submitted in a complaint for any purpose other than investigating and resolving the complaint.

5. Complaints Register

CCIR maintains an internal complaints register recording: the date of receipt, a brief description of the subject matter, the complainant category (e.g. credit agreement counterparty, rating agency, general public), the determination outcome, and any corrective actions taken. The register is retained for a minimum of five years.

An aggregate summary of complaints received and their outcomes is published annually as part of CCIR's governance review. The summary reports the total number of complaints by category, the number upheld, partially upheld, and not upheld, and a brief description of any corrective actions taken during the period. Individual complaints are not identified in the published summary.

6. Oversight Board Escalation

Until the CCIR Oversight Board is formed (targeted Q1 2027), the CCIR administrator's determination is final. Complainants who believe a determination is unreasonable are encouraged to provide additional information or arguments, which will be considered in a supplementary review.

Upon Oversight Board formation, complainants dissatisfied with the administrator's determination may submit a written escalation request to the Oversight Board within 10 business days of receiving the determination. The escalation request should set out specifically why the complainant believes the determination is inconsistent with the published methodology or governance framework. The Board's decision on escalated complaints is final. The governance document will be updated upon Oversight Board formation to reflect the Board's escalation procedures.

7. Relationship to Change Management Policy

Where a complaint, on investigation, reveals that the published methodology requires amendment to address a systematic issue, CCIR will initiate the appropriate change management process under the Benchmark Change Management and Versioning Policy. The complainant will be informed that their complaint has prompted a methodology review and will be notified of the proposed change under the standard notice procedures.

The complaints process and the change management process are separate procedures. A complaint is resolved by a determination on the specific subject matter of the complaint. A methodology change triggered by a complaint follows the standard change management timeline, which may extend beyond the complaints resolution timeline.

8. Document Control
